

**The Burlington County Division of Mosquito Control
is asking for your assistance & cooperation, in order to more
effectively reduce mosquito populations in your neighborhood.**

Please use our suggestions for your yard.

**If you need additional information or assistance,
please contact us at 609-265-5064 or
mosquito@co.burlington.nj.us**

**For a Mosquito Complaint Form or Stagnant Pools Complaint Form
please visit
www.co.burlington.nj.us/469/Mosquito-Control**

**Mosquito breeding around the home can be greatly reduced by these simple
steps:**

1. Empty, drain, remove, cover or turn upside down any container that can hold water.
2. Change water in birdbaths frequently, at least once a week.
3. Empty and refill pets' water dishes daily
4. Store tires inside garage or shed, cover to prevent water from accumulating in them, or dispose of properly.
5. Keep rain gutters clean so that water does not accumulate in them.
6. Prevent or remove accumulation of rain or sprinkler water on all plastic covers or tarps.
7. Maintain swimming pools and ornamental ponds properly. Do not let water accumulate on swimming pool covers.
8. Empty small wading pools weekly. Store indoors when not in use.
9. Do not dispose of grass clippings, leaves, branches, litter or other items in catch basins, storm drains or ditches.
10. Repair leaking pipes and outside faucets. Don't let runoff water from air conditioners collect in shady areas.
11. Repair faulty septic systems.
12. Empty toys in the yard that can hold water.

NO STANDING WATER = NO MOSQUITOES
